

After-Care Instructions for Your IV Drip Treatment

Congratulations on completing your IV drip treatment at Grand Genesis! Most patients start feeling the benefits almost immediately. **To ensure the best results and your safety, please follow these after-care instructions carefully:**

Post-Treatment Instructions

1. **Leave the Bandage On:** Keep the bandage on the injection site for at least 15 minutes. Most light bleeding will stop during this time. If bleeding persists, replace the cotton pad with a new one and apply gentle pressure.
 2. **Keep the Area Clean and Dry:** Avoid exposing the injection site to water for at least 1 hour after the treatment.
 3. **Limit Activity:** Avoid intense physical activity or putting stress on the puncture site for 24 hours post-treatment.
-

Important Notes

Although our IV drip treatments use clinically tested, stability-tested, premium-quality ingredients, every individual reacts differently. If you notice anything unusual, please review the information below for guidance.

When to Seek Medical Assistance

Contact a medical professional immediately if you experience any of the following:

- Bleeding from the puncture area that hasn't stopped after 30 minutes.
- A large or painful bruise develops at the puncture site.
- Swelling at the puncture area that does not subside within 24 hours.
- Numbness around the injection site or in the entire arm.

After-Care Instructions for Your IV Drip Treatment

- Shortness of breath, a rash, or itching sensations (potential signs of an allergic reaction).
- Development of a fever or any other concerning symptoms.

If you have any questions or need further assistance, don't hesitate to contact us directly at (647) 238-7723.
